

BEEELAND SMART HOME NETWORKING, LLC

"Your only source for complete home control!"

*Safety
Security
Efficiency
Peace of Mind*

**Make your Home an efficient Smart Home Today!
Want to monitor your home or business remotely?
Ever heard of "Smart Kitchen Cabinets"?**

Networking

Are you having trouble hooking up your computer? Do you have more wires than connections? Do you want your computer, network, printer worries to disappear? Call us today and we will help. Problems occur everyday with computer users and it is hard to stay up-to-date and trained. We can take any problem, troubleshoot it, map out a plan of attack and fix it. Although our company is new and just starting out, we aren't new to the computer world. So enjoy your computer and sit back, let us do the worrying for you.

We can custom design and build a Smart Home or Business Network that fit your needs. After the Network systems are installed we offer Network Construction which will allow the user to log into system and control it remotely. In today's world all systems are automated and require computers to be up-to-date and protected. After all of this we can then construct a web site for your business or help you through the process.

Services

- Complete Home Networks
- Smart windows and doors
- Smart kitchens
- Home Theater Systems
- Lighting Controls
- Energy Management
- Security Systems
- WEB Based Control
- Palm/Remote Control

Smart Glass

What is "Smart Glass"? Smart glass is a relatively new term for glass that has the ability to change its appearance. This can be accomplished by the user or automatically based on changes in the surrounding environment.

What makes it "Smart"? A variety of new-generation, electrochromic and electro-optical films and coating technologies are used to transform normal glass into a changeable or "Smart" glass. This is accomplished by laminating a film or coating within two plies of glass or plastic that is energized to change its opacity and color.
